

**VTEM SURVEY COMPLETED OVER QUEBEC PROJECT AREAS**

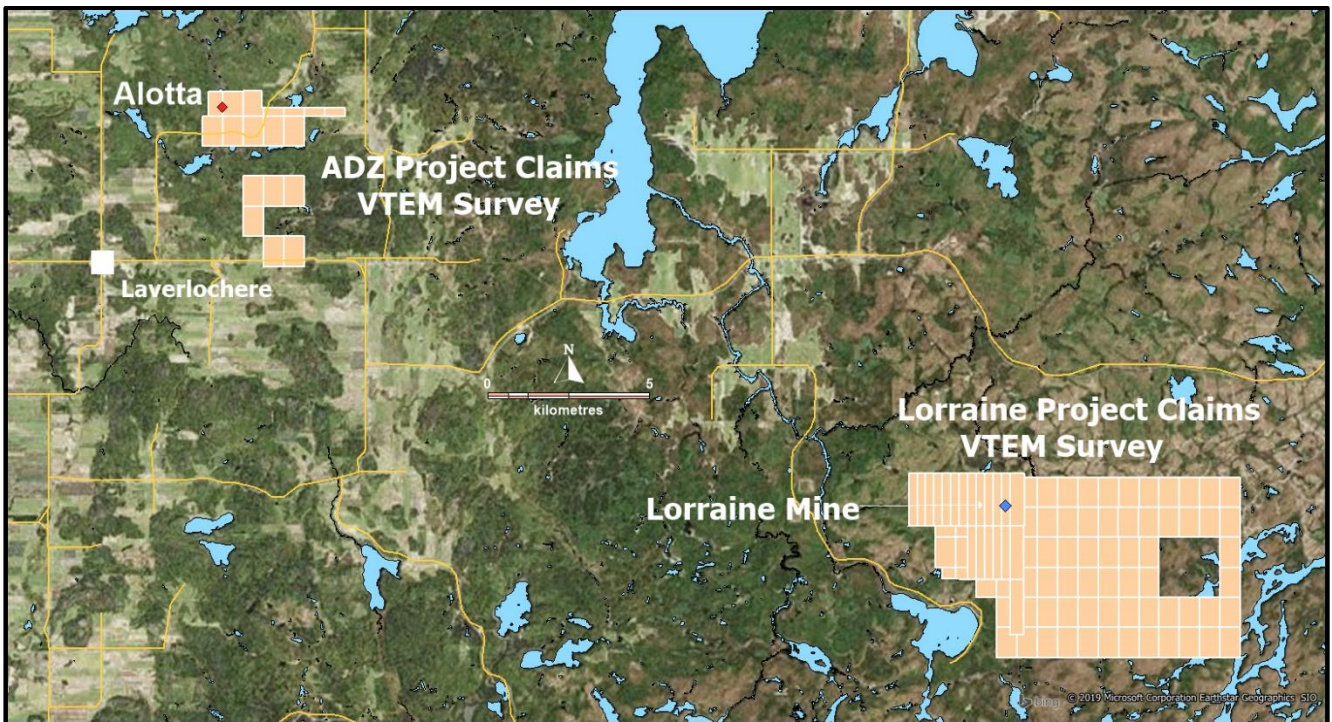

Ontario based Geotech Ltd have today reported the completion of the 718 line-kilometre airborne electromagnetic survey over the Company's **Lorraine and Alotta-Delphi-Zullo (ADZ)** Project areas in south-west Quebec (Figures 1 and 2).

The Canadian projects are held by Zeus Olympus Sub Corp a 100% owned subsidiary (through Zeus Minerals Limited) of Chase Mining Corporation Limited (CML).

**Figure 1: Project Locality Map**

**Figure 2: Project Locality Map – Showing the Lorraine and ADZ VTEM Survey Areas**

The survey was flown using Geotech’s helicopter-borne Versatile Time-Domain Electromagnetic (**VTEM™ Max**) geophysical system. The principal targets within the Company’s claims are nickel-copper-cobalt-precious metal massive sulphides (conductors) associated with the basal zone of differentiated gabbro sills in the Belleterre-Angliers Greenstone Belt (ASX 4 March 2019).

Extreme weather conditions including high winds, whiteout snowstorms and frozen rain plus equipment malfunctions caused delays in completing the survey. Geotech and the Company’s consultant geophysicist have now signed-off on the QA/QC of the data.

Geotech will release the preliminary data to the Company following receipt of a further 45% of the scheduled fee. The remaining 5% will be paid upon delivery of the final data.

The Company anticipates that processing of the data to produce a preliminary anomaly map once received will be completed within a week. Detail interpretation and drill target generation will follow that assuming there are worthy preliminary anomalies.
